EDUCATION

University of Toronto

B.Sc. Mathematical & Physical Sciences

Toronto, ON

Expected 2030

EXPERIENCE

Vector Institute — Jinesis AI Lab, CleverHans Lab

Machine Learning Researcher

Nov 2025 – Present

Toronto, ON / Remote

- **First author**, *FOMO: Forecasting with Other Markets' Observations* (under review, **ICLR 2027**): a training-free method that restricts cross-series attention to late layers of time-series foundation models, improving forecasts in **15/15** settings across **4 models** and **5 datasets** and cutting worst-decile loss by a median **5.3×**.
- Studying **strategic silence and emergent deception** in LLM agents for an AI safety paper targeting **ICML 2027**.
- Built **WordPlay**, a composable Python framework that expresses **2,000+ line** DeepMind Melting Pot substrates in **~300 lines**, and used it to create a **57-scenario** LLM RL benchmark evaluating **Llama 3.1 8B**, **Llama 3.2 1B**, and **GPT-5.4** on coordination and social reasoning.

Silmo

Machine Learning Engineer, Internship

Jun 2026 – Jul 2026

Toronto, ON

- Reduced forecasting loss by **18% versus Toto-2 4M** and **22% versus Chronos-Small** on Kalshi and Polymarket data by developing **GraphTSFM**, a **50M-parameter** graph-based time-series foundation model.
- Enabled probabilistic **24-hour forecasting** and large-move detection by developing quantile and jump-prediction heads optimized with a custom multi-objective loss.

Claymoo

Software Engineer, Internship

Aug 2025 – Dec 2025

Markham, ON

- Reduced page-load latency by **40%** for **10,000+ daily visitors** by implementing dynamic loading with Shopify Liquid and JavaScript.
- Eliminated **90% of inventory errors** across **50+ spreadsheets** and saved approximately **5 hours per week** by building Python and Google Apps Script reconciliation pipelines.

ENTREPRENEURIAL VENTURES

AmplifyfeAI

Founder, CTO

Oct 2025 – Mar 2026

Remote

- Reached **\$2,000+ MRR** within **2 months** by building and deploying custom n8n workflow automations for **3 small-business clients**.
- Eliminated weekly scheduling work for a **15+ person team** by developing a Slack bot that parsed employee availability and automatically generated formatted CSV schedules.
- Saved each client **10+ hours per week** by designing end-to-end automation systems spanning invoice generation, CRM orchestration, and client follow-up sequences.

Independent Algorithmic Sports Betting

Software Engineer

Dec 2024 – Feb 2025

Remote

- Captured mispriced odds within seconds with an automated +EV and cross-book arbitrage pipeline.
- Grew bankroll **6×** (**\$5,000 to \$30,000**) in **3 months** via +EV betting, arbitrage, and Kelly Criterion sizing.

AWARDS

USACO: Platinum Division (1x), Gold Division (3x) | **Canadian AI Olympiad**: Top 20 Worldwide

Hackathons: 3x 1st Place, 2x 2nd Place | **DECA**: Provincial Champion

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, HTML/CSS, Shopify Liquid

ML / Quant: PyTorch, Reinforcement Learning, Multi-Agent Systems, GNNs, Time-Series Forecasting

Tools: React, Node.js, Docker, GCP, n8n, OpenAI API, Anthropic API
